DETAILED ACTION

Response to Amendment

- 1. This communication is responsive to Amendment F, filed 8/16/2007.
- 2. Claims 1,4-8,11-15 and 18-21, and 37-39 are pending in this application. Claims 1, 8, 15, 23, 24,25, are independent claims. In Amendment F, Claims 1,4,11-15, and 18-21 were amended, claim 22 was cancelled, and Claims 37-39 were added as new.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1,4-8,11-15 and 18-22 are rejected under 35 U.S.C. 103(a) as obvious over Onaga ("Onaga" US 6,266,693) in view of Heddaya et al ("Heddaya", US 6,622,157) in view of Lawrence ("Lawrence", US 6,615,207) in view of Yacoub ("Yacoub", US 6,452,692).

Application/Control Number: 10/021,248

* Art Unit: 2174

As per claim 1, Onaga discloses an information processing apparatus capable of communicating with a plurality of peripheral devices, said apparatus comprising: a storage device, for storing predetermined objects for the peripheral devices based on directory information (Column 1 lines 25-43); detection means, for detecting specific objects in the directory information read from said storage device, the specific objects including at least a first specific object corresponding to a first one of the plurality of peripheral devices and a second specific object corresponding to a second one of the plurality of peripheral devices (Figure 9, Column 1 lines 25-43); display means, for displaying, in accordance with a tree list, the specific objects detected by said detection means (Figure 9); and control means, for permitting said display means to display, in accordance with the tree list, the specific objects detected by said detection means (Column 12 lines 51-64). Onaga fails to teach displaying devices in order of devices between apparatuses. However, Heddaya teaches a method such that the first specific object is displayed in preference to the second specific object if a number of other information processing apparatuses which exist between the first peripheral device and said information processing apparatus is smaller than a number of other information processing apparatuses which exist between the second peripheral device and said information processing apparatus (Column 3 lines 65 - Column 4 lines 4). Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Heddaya with the method of Onaga. Motivation to do so would have been to provide a faster response time and less network traffic. Onaga-Heddaya fails to

distinctly point out preferably displaying the devices in order within a tree list. However, Lawrence, teaches displaying objects in a tree list based on preference (Column 6 lines 31-45). Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Lawrence with the apparatus of Onaga-Heddaya. Motivation to do so would have been to provide a display tree relative to their respective needs. The modified Onaga fails to teach display preferences with a higher display priority for certain objects. However, Yacoub teaches displaying a list such that the closest printer is given priority and displayed at the top of the list (Column 15 lines 12-18). Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Yacoub with the modified method of Onaga. Motivation to do so would have been to alleviate the user of determining which printer is closest to send the job to.

As per claims 4, Onaga-Heddaya-Lawrence-Yacoub teaches an information processing apparatus, wherein said control means performs the sorting for an object display, so that the specific object is displayed at a higher location on a list (Onaga, Column 12 lines 51-64, Figure 9, Yacoub Column 15 lines 12-18).

As per claim 5, Onaga-Heddaya-Lawrence-Yacoub teaches an information processing apparatus according to claim 1, wherein, when the specific objects detected by said detection means are to be displayed on said display means in accordance with the tree list, and when one of the specific objects cannot be referred to directly due to access right limitations, said control means does not permit said display means to

display that one specific object, and wherein, when each one of the specific objects is unable to be referred to directly due to access right limitations, said control means permit said display means to display a higher object for which there are no access right problems (Onaga, Column 10 lines 1-54).

As per claim 6, Onaga-Heddaya-Lawrence-Yacoub teaches a tree structure in which the specific objects include an object for a printer device (Onaga, Figure 9).

As per claim 7 Onaga-Heddaya-Lawrence-Yacoub teaches an information processing apparatus, wherein the specific objects include an object for a compound device including a printer function (Onaga, Column 2 lines 26-34).

Claims 8,15 are individually similar in scope to claim 1, and are therefore rejected under similar rationale.

Claim 11 and 18 are individually similar in scope to claim 4 and are therefore rejected under similar rationale.

Claims 12 and 19 are individually similar in scope to claim 5, and are therefore rejected under similar rationale.

Claims 13 and 20 are individually similar to scope to claim 6, and are therefore rejected under similar rationale.

Claims 14 and 21 are individually similar to scope to claim 7, and are therefore rejected under similar rationale

As per claim 22, Onaga-Heddaya-Lawrence-Yacoub teaches a computer readable storage medium (Onaga, Column 4 lines 40 -65) for storing the control program.

Claims 37-39 are individually similar to scope to claim 1, and are therefore rejected under similar rationale

Response to Arguments

Applicant's arguments with respect to claims 1,4-8,11-15 and 18-21,37-39 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed; and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan F Pitaro whose telephone number is 571-272-4071. The examiner can normally be reached on 7:00am - 4:30pm Monday through Thursday, and on alternating Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kristine Kincaid can be reached on 571-272-4063. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
